

MAINTAIN SECURITY AND COMPLIANCE WITH OCIENT

In an era marked by increasingly large datasets full of important and sensitive data, data breaches have more potential implications than ever before. As the leading hyperscale data analytics platform, Ociant supports customers' data security from multiple angles. From security considerations built directly into the Ociant Hyperscale Data Warehouse™ to a comprehensive internal security program and annual recertifications, Ociant is committed to making data security a priority.

Built on a bedrock of security

To build the Ociant Hyperscale Data Warehouse, Ociant's team of engineers went back to basics, rethinking the way businesses use NVMe SSDs to process data. This paved the way for some very impressive performance improvements, plus it provided an opportunity to build in security at every step. All Ociant systems benefit from the following security features:

Role-based access control. Ociant's system-wide access control enables administrators to limit user access according to needs and roles.

Ingestion privacy. Masking or hashing data at ingest offers an additional level of protection, keeping sensitive data off the Ociant platform entirely.

View curation. With Ociant, customers can create views that limit, transform, or mask information to minimize data exposure.

Audit logging. The Ociant system can create logs of user authentication activities, permission changes, and more, then automatically share them with log analysis tools.

COMPLIANT WITH KEY SECURITY AND PRIVACY STANDARDS

The Ociant Hyperscale Data Warehouse provides customers with the capabilities they need to comply with the General Data Protection Regulation (GDPR), which applies to any business that processes data associated with citizens or residents of the EU or the UK.

The Ociant Hyperscale Data Warehouse provides customers with the capabilities they need to comply with the California Consumer Privacy Act (CCPA), which applies to any business that processes data associated with California residents.

Solutions deployed in the OciantCloud™ or managed by Ociant Management Services are certified annually to AICPA SOC 2 Type II.

FLEXIBLE DEPOYMENT OPTIONS

Choose the deployment modality that works best for your business and security needs

On Premises

Deployed on commodity hardware in your datacenter

Public Cloud

Amazon Web Services, Google Cloud Platform, or Oracle Cloud

OciantCloud™

Hosted in the Ociant datacenter

Ociant Management Services: Lighten the Load

Let our experts manage your deployment, helping with software installation, upgrades, and more so you can focus on more pressing business priorities. Ociant Management Services can also provide 24x7 system monitoring and reporting.

DELIVERING SECURE DEPLOYMENTS AND SERVICES

In addition to the built-in security features of the Ociant Hyperscale Data Warehouse, customers who deploy on OciantCloud or engage Ociant Management Services get the added peace of mind that comes with:

Comprehensive Internal Security Program

- AICPA SOC2 TYPE II compliant services
- Third-party penetration testing
- Personnel security program

Access Management

- Multi-factor authentication
- IP allowlists
- Restricted access to OciantCloud facility

Data Encryption

- Data-in-transit and data-at-rest encryption
- Direct connects to major public clouds
- System auditing/monitoring

Physical Security

- Environmental and physical security monitoring
- OciantCloud is hosted in SOC 2, ISO 27001, ISO 22301, DC OIX-2, HITRUST, PCI DSS, and FISMA-compliant data center
